

The AFlex Series of Constant Current Programmable LED Drivers offers high efficiency, smooth flicker-free dimming and Dim to off capability. Magnitude's wireless programming technology (FlexTool) enables full flexibility for OEMs to easily configure the drivers output current, dimming curve, dim-to-off, NTC settings and more. Programming the Driver doesn't require any power and can be done in less than one second. The auxiliary output provides power source for sensors and/or cooling devices and eliminates the need for an additional power supply. The Drivers wide operating window, dimming performance and programming options gives luminaire manufacturers high level of flexibility. As always, 5-year warranty is a standard on all of Magnitude lighting products.

LED THERMAL PROTECTION (NTC)

The AFlex Series of drivers helps protect the LED's lifetime and will reduce the temperature of the LED module by derating the output current in case of high temperatures. The negative temperature coefficient (NTC) thermistor must be connected to the LED driver as shown in the wiring diagram.

For maximum performance, the NTC thermistor must be placed close to the Tc point of the LED module.

The power derating parameters can be programed using the FlexTool programmer.

The NTC outputs can be left disconnected if thermal protection is not required.

Compatible NTC thermistor:

FLEXTOOL

PROGRAMMING THE AFLEX DRIVER

The “FlexTool” is a wireless programmer used to program Magnitude’s Flex Series of LED Drivers. By using the FlexTool, OEM’s can quickly and smoothly configure the drivers parameters without applying power or wires to the driver.

With the FlexTool software you can easily save driver configuration profiles to an external file and use as needed. The software provides graphic and audio indication that the driver was successfully configured.
